SUMMARY

Second-year Computer Science student at Ramdeobaba University focused on backend systems, distributed architectures, and scalable full-stack development. Experienced in building event-driven microservices, secure REST APIs, and transaction-oriented applications using Spring Boot, Kafka, and React. Strong foundation in data structures, algorithms, and applied machine learning workflows.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), SQL

Backend: Spring Boot, Spring Security, REST APIs, JPA/Hibernate

Messaging: Apache Kafka

Frontend: React, HTML5, CSS3

Databases: MySQL, H2, Redis

Tools: Maven, Git, GitHub, Postman, IntelliJ IDEA

EXPERIENCE

AI-ML Virtual Internship

Jul 2025 – Sep 2025

Google for Developers & AICTE EduSkills

- Completed a structured 10-week internship focused on applied machine learning workflows and practical data analysis pipelines.
- Performed dataset preprocessing including cleaning, normalization, feature extraction, and exploratory data analysis to improve model readiness.
- Implemented and compared supervised learning models, evaluating performance using accuracy, precision, recall, and cross-validation.
- Explored hyperparameter tuning and iterative experimentation cycles to optimize model performance across datasets.
- Developed end-to-end understanding of the ML lifecycle: problem formulation, data preparation, training, evaluation, and debugging.

Software Engineering Job Simulation

Jan 2026

JPMorgan Chase & Co. (Forage)

- Designed and implemented an event-driven backend microservice using Spring Boot and Apache Kafka for high-volume transaction processing.
- Built transactional data workflows including validation logic, persistence layers, and relational database interactions using Spring Data JPA.
- Integrated external REST APIs into backend architecture using service-layer abstraction and REST client patterns.
- Developed RESTful endpoints adhering to clean architecture and layered design principles with proper separation of concerns.
- Tested and debugged system behaviour across messaging pipelines, database operations, and API layers using Maven tooling.

PROJECTS

NeoWallet – Full-Stack Digital Wallet

Dec 2025 – Jan 2026

React + Spring Boot

- Built a full-stack digital wallet supporting complete transaction lifecycle management and real-time balance consistency across accounts.
- Implemented Kafka-based asynchronous event processing and Redis caching to achieve scalable, low-latency backend workflows.
- Designed secure JWT-authenticated REST APIs with role-based authorization, refresh token rotation, and fine-grained access control.
- Developed React dashboards with real-time transaction history, balance displays, and responsive UI integrated with backend services.

SentinelAPI – API Security Testing Platform

Jan 2026 – Feb 2026

Spring Boot + Parallel Security Scanning – GitHub

- Built a modular API security scanner running 8 vulnerability checks concurrently using `CompletableFuture` for parallel execution.
- Detected CORS misconfigurations, missing security headers, dangerous HTTP methods, XSS, SQL injection, and SSL/TLS weaknesses.
- Implemented an Attack Chain Engine to model multi-step exploit paths, assign weighted risk scores, and prioritize remediation steps.
- Designed a REST interface for submitting target endpoints and receiving structured, actionable security reports with severity ratings.

EDUCATION

Ramdeobaba University (RBU), Nagpur
B.Tech Computer Science and Engineering

2024 – 2028
CGPA: 8.94
